Lucas Ault

La Verne, CA | lucas@lucasault.com | 909-618-5898

Senior Cybersecurity Engineer with over 7 years of experience securing enterprise environments at scale, including 4 years engineering Zscaler environments for 250,000 global users in 24x7 production. I drive secure access modernization through Zero Trust architecture and automation, design CI/CD workflows for multi-tenant SASE and SWG deployments, and architect on-premises and cloud-native solutions. My focus is enabling organizations to enhance security, streamline operations, and accelerate digital transformation.

Skills and Certifications

- CompTIA Security+
- AWS Cloud Practitioner
- Cisco DevNet Associate
- Zscaler ZCCA - Private Access
- Zscaler ZCCA - Internet Access
- Zscaler ZCCA - Security Specialist
- Zscaler ZCCA - Zscaler Digital Experience
- Javascript, Python, and YAML proficiency
- Network Infrastructure and VOIP
- Proxmox and ESXI Hypervisors
- Kubernetes, Docker, Helm, and Flux CD
- DevOps and CI/CD workflow automation

Work Experience

Raytheon Technologies **Remote (California)**
Senior Analyst, Cyber Defense *October 2022-Present*

- Engineer and support enterprise Zscaler services (ZIA, ZDX, Client Connector) for 250,000 global users as part of a six-person team, owning PAC policy, connectivity troubleshooting, incident response, and user-impact analysis in a 24x7 production environment.
- Developed a CI/CD platform for ZIA PAC management across four enterprise tenants, automating validation, peer review, deployment, and rollback workflows using GitLab, Python, YAML, and JavaScript for PAC logic. This reduced configuration errors and enabled safer change processes.
- Led the U.S. deployment of Zscaler Digital Experience (ZDX), coordinating security-control and ATO alignment, approvals, stakeholder presentations, and support enablement. Established enterprise-wide visibility into digital experience and application performance.
- Automate repetitive security workflows using Python, GitLab CI/CD, and AI tools to reduce manual administration and improve configuration consistency across enterprise Zscaler environments.
- Author engineering procedures, runbooks, and operational directives for Zscaler support teams. Provide technical guidance across networking, endpoint, identity, and security teams to enable incident response and policy enforcement.
- Present to and cross train colleagues in audiences over 150 attendees on secure web gateway fundamentals, new features, technical design and architecture, disaster recovery processes, and DevOps foundations and best practices.

Bolt Box AI **Remote (California)**
Technical Consultant *November 2025-Present*

- Architect a multi-tenant AI communications platform with a focus on security, tenant isolation, and reliability, translating business requirements into cloud-native infrastructure and operational designs.
- Designed a cloud-native architecture for eight production services using Kubernetes, PostgreSQL, Redis, Next.js, Node.js, FastAPI, Twilio, and AI model APIs, implementing role-based access control, API authentication, and data encryption to secure multi-tenant environments.
- Implement GitOps and CI/CD practices using FluxCD, Helm, GHCR, encrypted configuration management, structured validation, and distinct development and production release workflows.

Specialized Bicycle Components / Incycle Bicycles **Pomona & San Dimas, CA**
Assistant, Digital Operations & IT Systems Administrator *May 2019 – October 2022*

- Implemented integrations between internal and vendor systems to improve product data consistency and reduce manual workflows across retail and warehouse environments.
- Administered IT and network security infrastructure across multiple retail locations, including firewalls, VPNs, endpoint security, and network segmentation. Delivered cross-functional projects to harden POS systems and secure remote access.
- Managed a team of three data entry, marketing, and e-commerce support specialists to further build and develop Incycle's online catalog and presence.

Education

California State Polytechnic University, Pomona

- *Bachelor of Science, Computer Information Systems with an emphasis on cybersecurity and forensics – December 2021*

Projects / Home Lab

- Experiment with a dedicated multi-node K3S, Docker, and Proxmox environment on a segmented home network to explore Kubernetes, virtualization, routing, DNS, VPNs, monitoring, self-hosted services, and emerging infrastructure and security technologies.
- Maintain a multi-system home server stack that hosts production services for my family and friends, including Home Assistant, TrueNAS, Immich, Tailscale, and more.
- Host open-source AI inference models for use with agents, coding applications, and home automation
